AGILE:

1. Complete these user stories:
   - As a vanilla git power-user that has never seen GiggleGit before, I want to have an engaging onboarding experience that will familiarize me with the unique features of GiggleGit but also allow me to transfer my existing workflows from other version control platforms such as GitHub and GitLab into GiggleGit.
   - As a team lead onboarding an experienced GiggleGit user, I want to create an engaging and interactive experience for my team to help them understand well the details of GiggleGit and how it stands apart from other version control platforms. I want to ensure they feel confident using the platform so they can effectively support and assist other team members as we transition into working with GiggleGit.
2. Create a third user story, one task for this user story, and two associated tickets.
   - Tasks should be a single phrase. (As should themes and epics. See those provided.)
   - User stories should be one to three sentences.
   - Tickets should have a title consisting of a single phrase and details that are long enough to sufficiently describe what needs to be done. You do not need to assign points to the tickets

User Story 3: As a project manager, I want to monitor project progress, manage merge conflicts and scale the project in a fun and engaging way, so I can maintain a positive team morale and encourage collaboration through humor and memes.
- **Task:** Develop a progress-tracking dashboard with a meme-based merge conflict resolution
  - **Ticket 1:** Build project progress tracking dashboard
    - Develop a dashboard that allows the project manager to monitor real-time project progress including commit history, branch status and team contributions. The dashboard should provide a clear overview of the existing tasks, completed tasks and upcoming deadlines. Include visual plots such as graphs and bars to improve usability and provide a quick snapshot of the project health.
  - **Ticket 2:** Integrate meme-based merge conflict resolution
    - Implement functionality within the dashboard that triggers meme-based merge conflict resolution whenever a conflict occurs. Ensure that the conflict resolution process displays a random meme to lighten the experience – the system also should include an option

to approve conflict resolution through the meme interface while logging the resolution process in the project history.

3. This is not a user story. Why not? What is it?
   - As a user I want to be able to authenticate on a new machine
     1. This phrase does not include the "why" aspect of a user story. Although it provides a request, it does not specify the benefit they expect from being able to authenticate on a new machine. Thus, it is merely a user need or a request, instead of a story.
